PHASE 1 · FILE STRUCTURE ANALYSIS

Artifact Analysis Matrix

Optiv Case Study 2 — PII detection and redaction for Cadence Financial Group. The three sample evidence artifacts, as found on inspection.

Artifact	Format	Structure	PII / sensitive data	Main challenge	Extraction approach
Group Risk Management Policy v6.0 Cadence_Group_Risk_Management_Policy__v6.0.pdf	**PDF · 35 pages** Scanned page images, no text layer **OCR: every page**	• Sections 1–22 + Appendices A–E • Many tables, some split across pages • 13 figures: org charts, dashboards, screenshots, signed form, ID badge	Names, emails, phones, employee IDs, DOB, SSN, PAN, passport, PESEL, home addresses, card/account digits, IP addresses, photo, signatures *Where: 34 of 35 pages — body text, tables, narrative prose and inside figures*	• No digital text anywhere: all content comes from OCR • PII inside figures and in free-text narrative • Small, faint, skewed or white-on-dark text	• OCR each page after image clean-up (upscale, deskew, invert dark areas) • Keep page number and position for every word • Rebuild tables and reading order
Organizational Reference Pack Cadence_Financial_Group_Organizational_Pack.pptx	**PPTX · 9 slides** Digital text **OCR: not needed**	• Title and text boxes per slide • Org-chart cards (name, role and contact as separate shapes) • 3 tables: 2 RACI matrices, 1 directory	Names, work emails, mobile numbers *Where: slides 2–8 (16 people) — org charts, RACI headers, directory*	• Keep each name linked to its role and contact • RACI letters only make sense with the name in the column header • Short, non-standard phone numbers that strict validators reject	• PPTX-native extraction: shapes in position order, tables cell by cell • Include speaker notes, alt text and file metadata • Tag slide, shape and cell for traceability
TPRM Training — OneTrust configuration guide Cadence_TPRM_Training.docx	**DOCX** Digital text + 33 embedded images **OCR: screenshots only**	• Heading 1–3 sections, numbered lists • 16 tables incl. rule and questionnaire appendices • 29 UI screenshots, 4 diagrams	Names; one partial email *Where: user-group and version-control tables; 4 screenshots*	• PII inside screenshots • Names in one table cell run together if line breaks are dropped • Questionnaire wording about “personal data” is not PII (false-positive risk)	• DOCX-native extraction in reading order (paragraphs, tables, images) • OCR embedded screenshots and insert the text at their position • Include headers, footers and file metadata

Notes

- All three files also carry author names in their file metadata.
- The PDF and PPTX state that their data is synthetic. The DOCX does not, so its names are treated as potentially real.
